

MICHAELA DE BRUYN

DATA ENGINEER | DATA ANALYST

Business Analysis | Scrum Master

PROFESSIONAL SUMMARY

Data professional with over six years of experience spanning Data Engineering, Data Analytics, Business Intelligence, Business Analysis and Agile delivery. Experienced in SQL, Python, Databricks, Power BI and cloud-based data solutions, with a proven track record of improving business processes through reporting automation, data validation and stakeholder collaboration. Currently strengthening practical Data Engineering expertise through a project-based programme focused on building end-to-end data pipelines, ETL/ELT processes and dimensional data models for an e-commerce platform. Recognised for identifying opportunities to improve processes, bridging the gap between business and technology, and delivering scalable data solutions. Currently completing a Master's degree in Data Science and Machine Learning and expanding expertise in Data Engineering.

TECHNICAL SKILLS

SQL, Power BI (DAX), Tableau, Looker Studio, Excel, Data Modelling, Dashboard Automation, Data Validation, Python (Pandas, NumPy), Matplotlib, Seaborn, Jupyter Notebooks, Exploratory Data Analysis (EDA), Supervised Learning, Feature Engineering, Model Evaluation (F1-Score, ROC-AUC), Scikit-Learn, Cross-Validation, Google Cloud Platform (BigQuery), Databricks, Azure, Git/GitHub, ETL Concepts, Data Engineering, Data Pipelines, Data Ingestion

EDUCATION

MASTER'S IN DATA SCIENCE & MACHINE LEARNING

2025 – In Progress

University of Johannesburg

POSTGRADUATE DIPLOMA IN IT MANAGEMENT

2024 - 2025

Mancosa

BACHELOR OF SCIENCE IN IT

2021 – 2024

Richfield Graduate Institute of Technology

EMPLOYMENT HISTORY

JUNIOR DATA ENGINEER

Jul 2026 – Present

BrightLearn (Project-Based Data Engineering Programme)

Working on an end-to-end Data Engineering project for an e-commerce platform, designing scalable data solutions using SQL Server, Databricks and Python. Building data pipelines, modelling business data and preparing analytical datasets following modern Data Engineering practices.

Current Project: E-Commerce Data Platform

- Design and implement ETL/ELT pipelines to ingest e-commerce datasets from CSV source files into SQL Server and Databricks.
- Develop SQL queries and Python scripts to extract, transform and load data for downstream analytics.
- Build and maintain batch data pipelines to support reporting and business intelligence.
- Design conceptual, logical and dimensional data models, including star schemas, using Draw.io.
- Create and manage database tables to support analytical workloads.
- Perform data cleansing, transformation, validation and testing to ensure high-quality datasets.
- Develop and manage Databricks notebooks to support data engineering workflows.
- Participate in Agile sprints, stand-ups, code reviews and collaborative project delivery.
- Use Git and GitHub for version control, collaboration and documentation.
- Produce technical documentation, data flow diagrams and pipeline designs to support solution delivery.

Environment:

SQL Server • Databricks • SQL • Python • Git/GitHub • Draw.io • ETL/ELT • Data Modelling • Star Schema • Data Validation • Agile

SCRUM MASTER (Sep 2025 – June 2026)***Momentum***

Led Agile delivery across two data-focused teams, driving continuous improvement, stakeholder engagement, and data-informed decision-making. Combining Scrum leadership with reporting and analytics capabilities to improve visibility into team performance and delivery outcomes.

- Facilitated Agile ceremonies and coached teams on Scrum principles and delivery best practices.
- Established and documented Agile delivery processes and ways of working for newly formed teams, improving consistency, governance and delivery maturity.
- Designed and maintained automated Power BI dashboards to provide management with insights into team performance, sprint delivery, and operational metrics.
- Analyzed Jira and Agile delivery data to identify trends, risks, and opportunities for process improvement.
- Partnered with stakeholders to improve delivery planning, workflow efficiency, and Agile maturity.
- Supported reporting and data-related initiatives, including exposure to Databricks and cloud-based data environments.

SCRUM MASTER/ANALYST (Dec 2023 – Aug 2025)***Metropolitan***

Supported Agile delivery across multiple technology teams while driving reporting automation and data-driven process improvements.

- Facilitated Scrum ceremonies, sprint planning, reviews and retrospectives across multiple Agile delivery teams.
- Identified an opportunity to replace manual Excel-based Jira reporting with automated Power BI dashboards, improving reporting efficiency and visibility across five Agile teams and leadership.
- Developed weekly and monthly Power BI dashboards using Jira delivery data to provide real-time insights into sprint performance, team capacity and delivery metrics.
- Collaborated with stakeholders to define reporting requirements and deliver dashboards that improved transparency and supported decision-making.
- Analysed Jira delivery metrics to identify trends, risks and opportunities for continuous improvement.
- Supported reporting quality by validating delivery data and ensuring consistent reporting across teams.

Environment:

Power BI • Jira • Scrum • Agile • Reporting • Stakeholder Management/Engagement

BUSINESS ANALYST**Sep 2023 – Dec 2023*****Pragma***

Joined a project-based engagement to document business systems and processes across multiple engineering platforms. Collaborated with stakeholders, business users and technical teams to improve system understanding and establish documentation that supported future development and operational support.

- Conducted stakeholder workshops and interviews to analyse and document business processes across four operational systems supporting field and onsite engineering teams.
- Produced user stories, process documentation and functional requirements to improve system understanding and support future enhancements.
- Mapped end-to-end business processes and system interactions, creating clear documentation for technical and business stakeholders.
- Worked closely with cross-functional teams to translate business requirements into actionable development tasks.
- Contributed to improved knowledge sharing by establishing consistent documentation for previously undocumented business systems.

BI ANALYST**Jul 2022 - Aug 2023*****Pep***

Supported enterprise reporting and analytics by developing dashboards and delivering insights for the Sales domain. Worked closely with business stakeholders to gather reporting requirements and translate them into data-driven solutions while expanding into Business Analysis and data migration activities during the organisation's transition from Manhattan systems to Google Cloud Platform (GCP).

- Developed and maintained Looker Studio dashboards to provide visibility into sales performance, profitability, and business trends.
- Partnered with stakeholders to gather requirements, define reporting needs, and translate business requirements into dashboards and visualisations.
- Proposed and developed a comprehensive Data Dictionary during the migration from the legacy Manhattan system to Google Cloud Platform (GCP), creating a central reference for business definitions, datasets, tables, columns, KPIs and data ownership used by business users, analysts, Data Engineers and new team members.

- Performed SQL-based data extraction, analysis, validation, and testing to support operational and strategic reporting.
- Assisted Data Engineers and business users during the migration from Manhattan to Google Cloud Platform (GCP), supporting data validation, reconciliation, testing, and report verification activities.
- Performed data validation and testing to ensure the accuracy and consistency of reporting following migration.

Environment:

SQL • Looker Studio • Google Cloud Platform • Power BI • Jira • Business Analysis • Data Validation

MIXX CO. CONSULTING

Feb 2018 – Nov 2021

JUNIOR DATA ENGINEER (Nov 2020 – Nov 2021)

Promoted from Junior Data Analyst into a Data Engineer role, expanding responsibilities to include cloud migration, data ingestion, testing and validation while continuing to support reporting and analytics across retail and logistics consulting projects.

Supported cloud migration initiatives while expanding from analytics into Data Engineering responsibilities.

- Supported the migration of data from Excel (CSV) source files to Google Cloud Platform (GCP) by assisting with data ingestion, testing and validation activities.
- Wrote SQL queries to extract, transform and validate data used for reporting and migration initiatives.
- Collaborated with Data Engineers to support cloud migration activities and ensure data quality throughout the migration process.
- Performed data cleaning, validation and testing to improve reporting accuracy and data integrity.
- Continued developing Power BI reporting solutions while transitioning into Data Engineering responsibilities.
- Built foundational experience in ETL concepts, data migration and cloud-based data solution

DATA ANALYST (Feb 2018 – Oct 2020)

Supported reporting and analytics across retail and logistics consulting projects, developing a strong foundation in SQL, business intelligence and stakeholder engagement.

- Developed Power BI dashboards and reports to support operational and business reporting.
- Wrote SQL queries to analyse and validate business data for reporting and decision-making.
- Collaborated with business stakeholders to understand reporting requirements and deliver analytical solutions.
- Performed data cleansing and validation to improve the quality and consistency of reporting.

TECHNICAL PROJECTS

HOSPITAL PATIENT FLOW ANALYSIS

Objective: Analyse hospital patient-flow data to identify patterns in admissions, patient movement, length of stay and operational bottlenecks using SQL and data quality techniques.

- Cleaned and standardised hospital patient-flow data, including handling inconsistent values, date formats and duplicate records.
- Used SQL to analyse admissions, patient movement, length of stay and ward-level activity.
- Investigated near-duplicate records and applied data standardisation to support reliable analysis and reporting.
- Built analytical queries to identify patient-flow patterns, operational trends and potential bottlenecks.
- Validated key business rules and data relationships to ensure accurate analytical outputs.
- Designed queries to verify uniqueness and data integrity after data cleaning and merging.

Tools & Technologies: SQL, Data Cleaning, Data Validation, Data Quality, Exploratory Data Analysis, Healthcare Analytics

URBAN BASKET DATA WAREHOUSE

Objective: Build an end-to-end e-commerce data warehouse to ingest, transform, model and prepare transactional data for analytics and reporting.

- Designed an end-to-end data architecture covering source ingestion, staging, transformation and analytical layers.
- Built SQL-based data pipelines to load and transform e-commerce data from source files into structured warehouse tables.
- Designed dimensional models and star schemas to support customer, product, order and sales analysis.
- Applied data cleansing, standardisation and validation checks to improve data quality and consistency.
- Created analytical datasets designed for downstream reporting and business intelligence use cases.
- Documented data flows, relationships and warehouse design to support maintainability and future development.

Tools & Technologies: SQL Server, SQL, Databricks, Python, ETL/ELT, Data Modelling, Star Schema, Git/GitHub, Draw.io
